

Exercise 2: Aggregates

- ① SELECT Count(id)
FROM employees_db;
- ② SELECT ~~first_name~~, ~~last_name~~, department, Sum(salary) AS ^{Tot_Salary}
FROM employees_db
~~GROUP BY~~
WHERE ~~salary~~ department = 'IT';
- ③ SELECT department, Avg(salary) AS Average_Salary
FROM employees_db
WHERE department = 'HR';
- ⑤ ④ SELECT department, Sum(salary) AS Total_Salary
FROM employees_db
GROUP BY department;
- ④ SELECT Min(salary),
Max(salary)
FROM employees_db;
- ⑥ SELECT ~~count(id)~~, City, Select City: Count(id) Tot_ID
FROM employees_db
GROUP BY City;
- ⑦ SELECT department, Avg(salary) AS Avg_Salary
FROM employees_db
GROUP BY department
ORDER BY Avg_Salary DESC;

⑧ SELECT department, sum(salary) AS Total_Salary
FROM Employee_db
GROUP BY department
HAVING Total_Salary > 100000;

⑨ SELECT City, count(id) AS Total_employees
FROM Employee_db
GROUP BY City
ORDER BY Total_employees DESC
HAVING Total_employees > 1;

⑩ SELECT department, ^{AVG}~~sum~~(salary) AS Average_Salary
FROM employee_db
GROUP BY department
ORDER BY Average_Salary DESC
Limit 1;
